

ABSTRACT OF THE DISCLOSURE

An embroidering device connected to a network and the network system thereof is disclosed, wherein an embroidering device 1 is connected to a personal computer 2 by means of wire or wireless while the personal
5 computer 2 is connected to a network 3 including an internet and is connected to an optional server 4. An instruction is given from the embroidering device 1 to the personal computer 2 to connect the embroidering device 1 to the network 3 and thereby to the server 4. The personal computer 2 seeks a required one of the information prepared by
10 the server 4 and downloads the sought information. For example, the personal computer 2 obtains a list of embroidery pattern data. When the user selects optional one of the pattern data, the selected pattern data is downloaded from the server 4 and transmitted to the embroidering device
1.
